

Stars: paired segment-level bootstrap (2000 resamples) of $\text{mean}(\text{EA}) - \text{mean}(\text{EE})$. + favors algorithm; - favors experts. *** $p < 0.001$ ** $p < 0.01$ * $p < 0.05$. Bars: 95% CI on the mean from the same bootstrap. Open circles: per-pair point estimates (6 EE pairs, 4 EA pairs across MW/SZ/TZ/AS). y-axis truncated to 0.65–1.05 to make EE-vs-EA differences visible.
